Revision-Safely Document Archiving

SHC Karben files Documents electronically using ArcFlow

SHC Karben GmbH has chosen the ArcFlow document management system (DMS) for the future digital filing and archiving of their documents. The specialized distributor for relays and connectors wants to optimize its business processes using ArcFlow whilst at the same time archiving its documents in a law-compliant way.

At the beginning SHC will deploy ArcFlow just as an archiving system for all documents like order forms, order acknowledgements and invoices. The documents, which are generated by the ERP system Navision, are automatically imported into ArcFlow using the seamless connection to Navision. For making the process more transparent and efficient the company intends to redesign the goods incoming process using workflows in the near term future.

“The ArcFlow overall concept has convinced us. All documents are subjected to a full text recognition. “

Wolfgang Schwerdtfeger, IT Manager at SHC

ArcFlow was chosen amongst various competitor solutions. „The ArcFlow overall concept has convinced us“, IT head Wolfgang Schwerdtfeger explains the decision in favor of ArcFlow. „All documents are subjected to a full text recognition - we can not only see the indexed text but can also complement it at our discretion. Furthermore we very much like the ArcFlow client-server-architecture.“
